PROFESSIONAL SUMMARY

Supply chain and operations professional with 8 years of experience across planning, inventory, logistics, procurement, and warehouse operations in multi site, multi country networks spanning Nigeria, Ghana, and the wider EMEA region. Manages stock across 11 warehouse and field stocking locations and a wider network of 111 stocking points, servicing an install base of 4,282 machines with around 1,300 active SKUs and 119,000 units valued at about \$2 million, supported by 7 third party logistics partners. Improved inventory accuracy from 45% to 98%, delivered \$45,000 in annual savings through cost analysis, and recovered over \$30,000 by building a billing validation control. Experienced in demand and supply planning, third party logistics management, process improvement, and performance reporting, with a strong command of ERP and analytics tools. Leads cross functional teams, works closely with finance, operations, and commercial partners, and delivers steady gains in cost, service, and efficiency.

CORE COMPETENCIES

Planning: Demand planning, supply planning, capacity planning, inventory optimisation

Inventory and Warehousing: Inventory accuracy, cycle counting, stock control, warehouse operations, reverse logistics

Logistics and Distribution: Inbound and outbound logistics, transportation coordination, on time delivery, multi site and cross border distribution

Procurement and Vendor: Third party logistics management, vendor negotiation, cost analysis, contract and SLA management

Process and Improvement: Process standardisation, Lean, root cause analysis, SOP development, continuous improvement, sustainability

Leadership: Team leadership and development, cross functional collaboration, stakeholder management

Systems and Analytics: ERP (Microsoft Dynamics 365), Power BI, SQL, Advanced Excel, KPI and performance reporting

PROFESSIONAL EXPERIENCE

Senior Supply Chain Analyst

NCR Atleos, Nigeria and Ghana | February 2023 to Present

- Manage end to end supply chain across 11 warehouse and field stocking locations, and a wider network of 111 stocking points including field engineer and mobile stock locations in two countries, servicing an install base of 4,282 machines with around 1,300 active SKUs and 119,000 units.
- Improved inventory accuracy from 45% to 98% by standardising core processes, tying each step to a system transaction, and embedding structured cycle counting across all sites.
- Manage an inventory portfolio of about \$2 million and operational budgets above \$500,000, optimising stock positioning and availability while controlling cost.
- Manage 7 third party logistics and carrier partners, spanning international express and domestic last mile, against clear KPIs and SLAs, running performance reviews and driving corrective action to protect service and cost.
- Delivered \$45,000 in annual savings by tracing a recurring \$3,750 monthly cost exposure through line by line analysis and a local market rate survey, then redesigning the billing structure.
- Built a billing validation control that reconciles internal shipment records, proof of delivery, and weight data against vendor invoices, recovering over \$30,000 in historical overcharges and generating recurring credit notes.

- Led a sustainability initiative to upgrade 510 obsolete units across 46 part lines instead of scrapping them, recovering about \$29,700 in net usable value and reducing waste.
- Reduced manual reconciliation by 30 to 40% by strengthening transaction discipline and consolidating fragmented reports into a single reliable source.
- Led cross functional operations through disruption, including a 48 hour warehouse relocation that cleared 100% of inventory with zero customer escalations, recognised with an EMEA award.
- Lead and develop teams and site supervisors, authoring standard operating procedures, delivering training, and improving processes through team feedback.
- Monitor KPIs across inventory, logistics, and service, identifying gaps and implementing corrective actions focused on quality, cost, and delivery.

Logistics Analyst

NCR Nigeria PLC, Lagos, Nigeria | March 2017 to January 2023

- Delivered a 15% reduction in operating costs and a 20% improvement in inbound logistics performance through process optimisation and system alignment.
- Supported supply chain planning, inventory control, and distribution across multiple locations, maintaining stock availability and delivery performance.
- Built operational reporting and dashboards in Power BI and Excel to support demand planning, inventory monitoring, and management decision making.
- Partnered with operations, finance, and supply chain teams to improve planning accuracy, process compliance, and performance visibility.
- Implemented process controls that strengthened supply chain governance and audit readiness.

EDUCATION

MSc, Industrial and Labour Relations, University of Lagos, Nigeria

BSc, Sociology, University of Lagos, Nigeria

CERTIFICATIONS

Microsoft Dynamics 365 Supply Chain Management (MB-330, in progress)

Microsoft Dynamics 365 Fundamentals (MB-920)

Certified Data Analyst, Utiya
